**AGRIPAK OFFSET DISC HARROW (Hydraulic cum Trailed)** has a heavier weight per Disc and thus has the penetration ability to break down large clods normally left after Disc Ploughing or Chisel Ploughing in hard grounds. It is of robust construction, made of solid high-tension heavy-duty steel frame, used as mounted or trailed and ideal for chopping and mixing of stubbles and crop residues in the soils.

The Disc Harrow prepares the seedbed leaving the soil in granular form, which is the most suitable structure for plant growth. It aerates the soil, helps to conserve moisture for longer periods and eradicate weeds.

In sandy loam soils, this implement can also be used as primary tillage implement. Simply manipulating the offset angles of the gauges regulates the depth of Ploughing. By removing simply a pin, the Hydraulic position can be converted into trailed position and vice versa.
